Introduction:

- This project consists of a database which is for the Indian premier league- a Twenty-20 cricket league where teams are based on Indian cities which started in 2008. The database has information from the year 2008 through the year 2019. This database contains information about teams, every match played, players that participated, locations where the matches were played, and ball-by-ball stats. Using this database, one can retrieve various information about players, matches, etc.
- Database used: Oracle database 19 c
- IDE used: Oracle SQL developer
- JDBC driver type: OJDBC10

List of Tables:

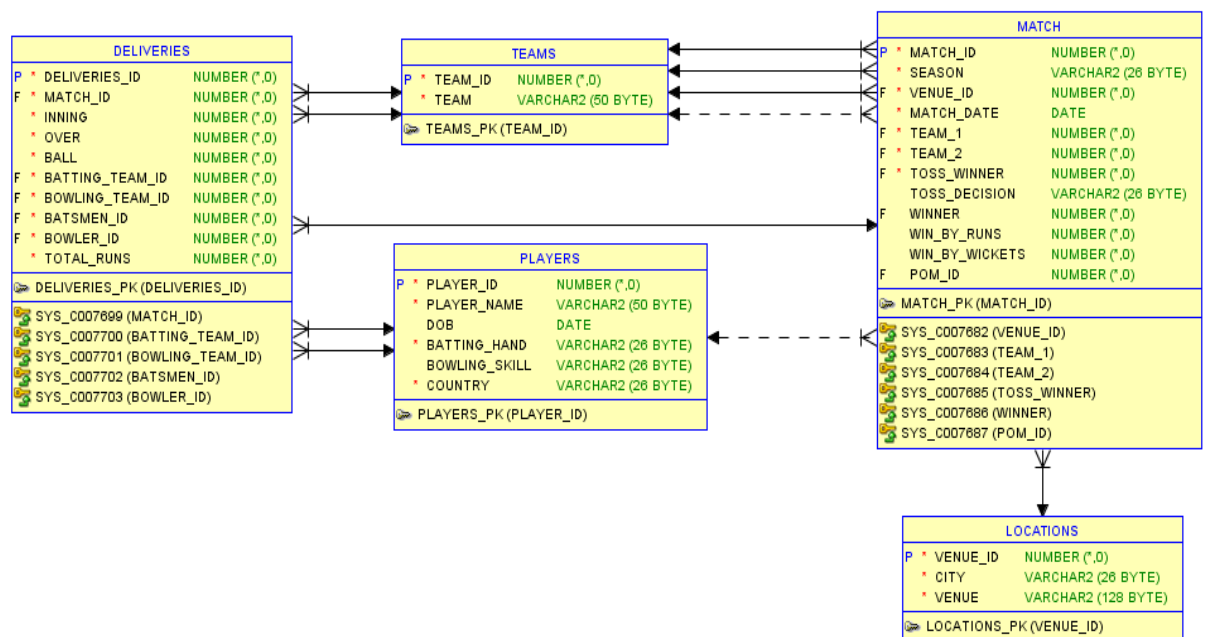

1. **TEAMS:** This table contains information about the respective team along with team_id's.
2. **LOCATIONS:** This table describes venue_id along with venue name and their respective cities.
3. **PLAYERS:** This table has player_id along with their names, date of birth, batting hand, bowling skill as well as their country.
4. **MATCH:** Match describes match_id along with the venue_id, both the teams that played that match, match date, toss winner, actual winners, player of the match, match won by runs, and match won by wickets.

5. **DELIVERIES:** This table contains ball-by-ball deliveries information according to the innings, bowler who bowled to the particular batsmen, total runs scored per ball, teams who played.

List of Views:

1. **PLAYER_BIO:** This view has player id, name, batting hand and bowling skill from table players.
2. **BATSMEN_STATS:** This view has player name, strike rate and average from table deliveries.

Entity – Relationship Diagram:

Type of SQL statements created for the project:

1. CREATE TABLE
2. INSERTION OF DATA
3. SELECT STATEMENTS
4. CREATE VIEW
5. CREATE TRIGGERS
6. INTEGRITY CONSTRAINT

The ordered sequence of scripts that are executed are given below and each output of script execution are given in the next section:

1. Teams.sql
2. Locations.sql
3. Players.sql
4. Matches.sql
5. Deliveries.sql

Set of SQL operations used on our database:

1. DDL- CREATE/DROP/ALTER
2. DML- IUD operations
3. DQL- SELECT
4. Aggregate
5. Group by/ Order by
6. Subquery
7. Joins:
 - Left
 - Right
 - Inner
 - Self
 - Theta
 - Multiway joins
